Single-Use Functions

Which functions in the repository are named in only one place besides their definition: how many there are, which ones are truly unused, and the full list of single-use helpers per tool.

PYTHON | PAGE JAVASCRIPT | UNUSED | APPENDIX

SUMMARY · READ-ONLY REVIEW

Scan of every tool file, the shared module and the CI scripts on branch ccr-9d4fe19f-ssud83. Nothing was run on a node.

What "used once" means here

Each Python `def` and each page-script `function` was found with a parser or a pattern. Its name was then counted as a whole word in the same file, strings included.

- **Single-use:** the name appears twice: the definition and one other place (a call, a table entry, or a button handler).
- **Unreferenced:** the name appears only at its definition.
- Python dunder methods and server hooks (`do_GET`, `log_message`, `handle_error` and similar) are left out, because the framework calls them.
- The count is per file, and a method name shared by several classes is counted together, so it can hide a single-use method. A helper used once from a loop or a handler may run many times. "Once" is about where it is named, not how often it runs.
- The pi02w tools and the common tools come first. The full build is listed last, for reference only.

How many functions are named once

TOOL	PYTHON DEFS	USED ONCE	SHARE	UNREFERENCED	PAGE JS FUNCTIONS	USED ONCE	SINGLE-USE AND FOUND IN NO OTHER FILE
Node Controller (Dashboard) pi02w	550	252	45%	0	245	67	3
SysMon pi02w	556	297	53%	4	339	145	1
instmon	475	239	50%	0	140	51	261
wifimon	372	181	48%	0	91	41	208
44helper	977	498	50%	0	459	181	651
Node Talker	468	213	45%	0	357	129	172
Node Recorder	393	180	45%	0	115	48	75
Pibrary	338	186	55%	0	210	67	225
amp Node Talker	181	70	38%	0	144	52	24
Confputter	31	17	54%	0	0	0	15
shared/confio.py	21	14	66%	0	0	0	0
ci/check_repo.py	27	13	48%	1	0	0	13
ci/promote.py	10	5	50%	0	0	0	4
Full build: Node Controller	543	253	46%	0	245	67	4
Full build: SysMon	884	406	45%	71	433	191	180

Over the pi02w and common tools, 2,165 of 4,399 Python functions (49%) and 781 of 2,100 page-script functions (37%) are named once. Single-use is the normal case: most of these are small helpers that give a step a name, which is how the code is written, not a defect.

The last column counts single-use names that no other file defines. A single-use function that has a copy in another tool (the shared functions, the Dashboard and its full build) is not unique to that tool.

Functions named only at their definition

Of the names that appear only once, almost all are called in ways a word count cannot see. Checked by hand, two are unused.

FILE	FUNCTION	WHAT WAS FOUND
44helper (page script)	`_ovLevelLabel`	Defined near line 19572, never called. Unused.
44helper (page script)	`qmEsc`	Defined near line 25190, never called. Unused.

3.1 Looks unused, is not

- **Tab functions in 44helper** (`asl3OnDistroChange`, `asl3TogglePurge`, `asl3CustomRun` and the `dv`, `svx` versions): the page builds the handler name from a prefix at run time (`{prefix}OnDistroChange()`).
- **Registered by decorator:** in SysMon, `_phone_sec_health`, `_phone_sec_calls`, `_phone_sec_hoip` and `_phone_sec_modules` (pi02w and full build) are added to a section table by `@_phone_section`. In the full-build SysMon, 22 `_cs_*` functions (`@_con_sum`) and 45 `_ts_*` functions (`@_ts`) are registered the same way. They are used, by registration.
- **Run on the spot:** `_wireEdList` and `_authBoot` (Dashboard and SysMon pages) are wrapped in a function that runs at once. Pibrary's `$` is a helper whose name is not a word to the counter.
- **Framework hook:** `visit_Constant` in `ci/check_repo.py` is called by the Python `ast` visitor.

3.2 Why the two unused ones matter

Both sit in 44helper's page script. Removing them is a code change, and under the repo rules it needs a new version of 44helper. This summary changes no code.

Points for the book

- **Half the code is single-use helpers.** That is by design. A reader tracing a feature will find that most steps are a function called from one place.
- **The pi02w and full builds repeat each other.** The Dashboard and SysMon have near-identical function sets in both builds, so their counts overlap and should not be added together.
- **A word count is a first filter.** Registration by decorator, handler names built from a prefix, and immediately-run functions all look unused to it. Check each hit before deleting anything.
- **Not checked:** single-use methods whose names are shared with another class in the same file, and functions used only from another file (the shared module is copied into each tool, so its names appear in several files by design).

Every single-use function, by tool

Name and source line. Python first, then page script (marked js). Order follows the source.

Node Controller (Dashboard) pi02w: 252 Python, 67 page script
